Beautiful Memory With You

01 First meeting

Tension

The first meeting with Prof. Jorgen was on June 25th. We should have had a brief self-introduction, but because of the tension, we missed this chance to communicate with you. It's a little regret. Through this meeting, we know that you are a responsible teacher.

02 The course begins

The ocean of knowledge

In these five days of study, we have a preliminary understanding of digraphs. We knew how to use maximum flow problems to solve other problems, the structure of locally semicomplete digraphs, quasi-transitive digraphs and so on. For the explanation of other problems, we have a deeper understanding of digraphs and we can discover new and interesting research directions.

03 End of course

Thank you

Happy times are always short. Thank you for bringing us such a meaningful class. All of us want to say "thank you!". Here are some words that students want to tell you.
